Teacher: James Rogers
Clear Lake High School

Technology can sometimes be a lifesaver, and in other times it can be a way to waste time. Nancy Stern states that there are pros and cons to technology. I strongly agree with Stern because technology can either help you with a homework assignment or make you not do that homework assignment.

The technology that we are provided with helps us with certain homework. In my case for example, this year I am in Biology class and for that class there are many vocabulary words that just don't make sense to me. To help me understand a word, I look it up and find examples so it can help me understand it even more. History is also another example. In History, sometimes the textbooks get a bit confusing and I don't quite understand what they are trying to explain. So, to help me get a better understanding on topics, I sometimes go to a website that has an explanation on the topic I would be learning about. As a result, technology has a way of making something complicated become more understanding. Unfortunately, it can also lead to distractions.

As Stern stated, "It helps us save time – and it makes us waste time". Technology has many things to explore, which at times leads to distractions, which then lead to a waste of time. In my past and even in present experiences, I have gone through this problem. For example, you might say that you need the computer to study or even help you on homework, but technology has many ways for you to get distracted and waste your time. People may be getting help on the internet, and somehow they end up playing a video game against someone across the world, and it eventually becomes a waste of time.

In conclusion, I strongly agree with Nancy Stern. Technology has its ways to be helpful, but also many ways for it to become a waste of time.
