

## iPad Built-in Text-to-Speech Option

Starting with iOS 5 Apple included a settings feature called **Speak Selection**. You can select text from websites, email, messages, iBooks app, Pages app, etc. Then choose the Speak button to have the highlighted text read you. Turn on Speak Selection in Settings by choosing General, then Accessibility, and Speak Selection.

Using iOS 5 you have only one option to control the Speaking Rate. Using iOS 6 (below) you have several options including word by word highlighting of spoken text.

### To use Speak Selection:

1. Launch the app containing the text you would like your iPad to speak back to you.
2. Tap twice or hold down your finger on text you would like to hear read to you to pull up the copy/paste menu.
3. Highlight the text and in the text edit popup, select **Speak** button.
4. Your iPad will now speak the text back to you.
